About Me Hi. My name is Geoff. I am a relationship expert. I help marriages stay strong and thriving. I am an avid fan of children's music and other forms of children's entertainment. I live in Canada and I love the summers here. I was also in Canada's Wonderland's lighting & pyrotechnics crew. I am a serial entrepreneur and have been in business for over twenty years. My three greatest passions are family, children and history. About Me Marriage and Relationship Coach for Over 30 YearsBasal canine hypothalamo-pituitary-adrenocortical function, adrenocortical reactivity and cardiovascular system responses in the course of differential-stress and control situation in the dog. Stress can influence physiological function. The aim of the present experiment was to study the relation between the neuroendocrinological response to a stress situation and the cardiovascular response to this situation in healthy animals. Basal plasma cortisol, ACTH and prolactin were significantly increased in the stress situations. As regards the cardiovascular function, short-term changes in the blood pressure and heart rate induced by a stress situation were similar in both groups. Long-term changes in blood pressure and heart rate appeared, however, to be independent of an increase in plasma cortisol.Q: Object hierarchy issue - How to get my ArrayList through Hello everyone I have a list and it looks like this: private List campusList = new ArrayList(); It stores a list of objects from another class called Campus. The Campus class looks like this: public class Campus { private String name; private String address; private List students = new ArrayList(); public String getName() { return name; } public void setName(String name) { this.name = name; } public String getAddress() { return address; } public void setAddress(String address) { this.address = address; } public List getStudents() { return students; }
